

STATISTICAL LEARNING FOR AUTOMATION SYSTEMS

Model Identification and Data Analysis – Part 1

A.Y. 2022-2023

Prof. Simone Formentin

Prof. Simone Formentin

Dipartimento di Elettronica, Informazione e Bioingegneria
Politecnico di Milano

Office: 231 (DEIB, second floor)

Phone: +39.02.2399.3498

Email: simone.formentin@polimi.it

Web: WeBeep page

From Sept 12 until Oct 25 (Part 2 from Oct 26 until Dec 19)

The graphic is a class schedule titled "CLASS SCHEDULE" in large blue letters. Below the title, there are two fields: "YEAR" with the value "2022-2023" and "TEACHER" with the value "SIMONE FORMENTIN". Below these fields is a table with five columns representing the days of the week: MONDAY, TUESDAY, WEDNESDAY, THURSDAY, and FRIDAY. The table has two rows of class slots. The first row has a slot on Monday labeled "Conf. room" with an arrow pointing to the time "09:30/11:00", a slot on Tuesday labeled "6.0.1", and a slot on Friday labeled "5.0.3" with an arrow pointing to the time "08:30/10:00". The second row has a slot on Wednesday labeled "5.0.3" with an arrow pointing to the time "14:30/16:00". The table is framed by a light beige border with blue diagonal hatching at the top and bottom.

MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY
Conf. room 09:30/11:00	6.0.1			5.0.3 08:30/10:00
		5.0.3 14:30/16:00		

Course organization

- **5 CFU:** 39h lectures/exercises + (optional) 15h lab sessions
- **Lecture notes/exercises/lab sessions/codes/recordings of lectures:** available on WeBeep
- **Prerequisites:** Calculus, Linear Algebra, Statistics
- **Reference textbooks:**
 - ✓ *Learning from data*
(Amazon, ~\$28)
 - ✓ *An introduction to statistical learning with applications in R*
(freely available at: <http://www-bcf.usc.edu/~gareth/ISL/>)
- **Evaluation:**
 - ✓ Written exam on SLAS+SIAP (~7 questions, ~140min)
 - ✓ Mid-term call on SLAS (tentative date: Nov 7)

About the **labs sessions**

Prof. Simone Formentin

- Invented in the Netherlands, early 90's, by **Guido van Rossum**, a dutch programmer
- Named after *Monty Python*, a British surreal comedy group
- Open-source, scalable, **object-oriented** from the beginning
- It is now the **industrial standard for data science**

- Many languages require you to **compile** (translate) your program into a form that the machine understands.

- Python** is instead **directly interpreted** into machine instructions.

- Anaconda distribution of Python 3 + Jupyter Notebook (not only Python)
- All the notes can be downloaded as .py files and are compatible with any Python IDE or text editor
- <http://jupyter.readthedocs.io/en/latest/install.html> and follow the instructions (offline version of Jupyter Notebook)
- **IMPORTANT:** You are not expected to learn Python. However, you can take advantage of the lab sessions to do it!

Libraries (all already included in the Anaconda distribution)

- **Numpy** (Numerical Python package, <http://www.numpy.org/>)
Library consisting of multidimensional array objects and routines for processing such arrays (similar to Matlab).
- **Pandas** (<https://pandas.pydata.org/>)
Library of data structures and data analysis tools (advanced Excel-like).
- **Matplotlib** (<https://matplotlib.org/>)
- **Seaborn** (<https://seaborn.pydata.org/>)
Libraries for 2D data visualization and statistical plotting, respectively.
- **Scikit-learn** (<http://scikit-learn.org/stable/>):
Machine learning toolbox.

Introduction to **Statistical Learning**

Prof. Simone Formentin

What do we mean with «learning» in this course?

LEARNING:
using **Experience**
to gain **Expertise**

What can we learn?

- A task (learn «to do» something)
- A model (a description of the relationship among variables/signals)

Two types of «learning»

← **Human** Learning

Automated
(machine) learning →

Why to make **machines able to learn**?

- Some **tasks** are too **complex to program**
 - ✓ Computer vision: we know to detect objects but not how we do it!

- Some **tasks** would be too **time-consuming**
 - ✓ Search engines: a human cannot read the entire internet!

- **Adaptivity** and **speed of development**

But it seems a hard task...is it **worth the effort?**

YES!

“ A breakthrough in machine learning would be worth 10 Microsoft” (Bill Gates)

“Web rankings today are mostly a matter of machine learning” (Prabhakar Raghavan, Vice President of Engineering at Google)

Examples of machine learning applications

Spam filtering:

Binary classification: is this e-mail useful (ham) or spam?

Noisy training data:
Messages previously marked as spam

1° Challenge: Must target errors to user preferences

2° Challenge: Spammers evolve to counter-filter innovations

Examples of machine learning applications

Movie Rating Prediction:

Prediction: What will be the user ranking on a movie?

Noisy training data: rankings of all users on movies

1° Challenge: Must target current user preferences

2° Challenge: Data is very sparse, i.e., each user rates very few movies!

Examples of machine learning applications

Handwritten numbers recognition

Examples of machine learning applications

Credit scoring:

age	23 years
annual salary	\$30,000
years in residence	1 year
years in job	1 year
current debt	\$15,000
...	...

Given the applicant:

Using salary, age, etc., do we approve a loan or not?

Historic data play a key role!

Crucial in automation systems!

Learning table tennis
(Max Planck Institute and TU Darmstadt):

Crucial in automation systems!

«Classical» industrial robotics

- Very **specific task**
- Well **known environment**
- The **robot** can be «**programmed**»
(expensive and time-consuming)

«New-generation» industrial robotics

- **Complex** (multi)-**task**
- **Unknown environment**
- The **robot** cannot be fully «**programmed**»
(learning from experience is necessary)

Autonomous cars

- **Perception** problems
- Changing **environment**
- Strong link with supervision/control

General ML needs of in control problems

Black-box system **modelling**

SW-sensing

Auto-tuning of the controller

Some curiosities

- DeepMind is a company that developed a software which “learns” to play videogames. In 2014, it was acquired by Google (now it is called Google DeepMind) **for 500 M\$!!!**
- [AlphaGo](#), developed by Google DeepMind in October 2015 beat the Europe’s Go Champion! (Go is an ancient Chinese game)

Some curiosities

In **2017**, using data from Bureau of Labor Statistics and other resources, [CareerCast](#) ranked the **top 200 professions** in the U.S. according to several key factors, including median salary, expected job growth over the coming years, level of competition, amount of physical work required, safety hazards and amount of stress.

Rank	Title	Job score	Satisfaction	Median Salary
1	Data Scientist	4.8	4.4	\$ 110,000
2	DevOps Engineer	4.7	4.2	\$ 110,000
3	Data Engineer	4.7	4.3	\$ 106,000
5	Analytics Manager	4.6	4.1	\$ 112,000
7	Database Admin	4.5	3.8	\$ 93,000

Some curiosities

Job postings citing Data Science as a proportion of all IT jobs advertised
(source: ITJobsWatch)

Some curiosities

Expected business value
created by AI until 2030:

\$13
Trillions

It is **difficult** to find an industrial sector **that will not benefit** from AI in the near future

We will focus on Machine Learning!

LEARNING:
using **Experience**
to gain **Expertise**

We will focus on Machine Learning!

LEARNING:

using **data**

to gain **models**

We will focus on Machine Learning!

LEARNING:
using **data**
to gain **models**

Why «Statistical» Learning?

Finite set of data taken from the system

Learning

$$\begin{aligned}
 &|D(T, \epsilon, a, b)| \leq 2 \\
 &\varphi(S_1, t) \varphi(S_2, t) = \varphi(S_1 + S_2, t) \\
 &\ell(u) = \frac{\sum_{k=1}^n p_k^* \log \frac{1}{p_k}}{\sum_{k=1}^n p_k^*} \quad y = \phi(x) = \frac{1}{\sqrt{2\pi}} \int_{-\infty}^x e^{-\frac{t^2}{2}} dt \quad S(\alpha, T) = \frac{2}{\pi} \int_0^{\pi} \frac{\sin \alpha t}{t} dt \quad P(\eta_0 < X) = F(X) \\
 &S_n = A_n U \Pi A_n \quad W_k = \left(\frac{n}{k}\right) p^k (1-p)^{n-k} \quad P(\eta < \gamma | \xi = x) = \sup_{\gamma < \gamma_0, \gamma_0 \leq \gamma} P(\eta < \gamma | \xi = x) \\
 &|A_n| = \frac{n!}{2} \left| \int_{-1}^1 f(x) \log \frac{1}{f(x)} dx \right| < \epsilon \quad g^{-1} \cdot g = e \quad \gamma = \left(\frac{A_n}{V_n} \right) \left(\frac{\eta_n}{V_n} + \eta_n - \eta_n \right) \quad f(t|y) = \frac{2e^{\frac{t^2}{2}}}{\sqrt{2\pi}} \int_0^{\infty} \frac{e^{-\frac{t^2}{2}} du}{(1 - \frac{u^2}{t^2})^{\frac{1}{2}}} \\
 &\sum_{k=1}^n e^{-\frac{k^2}{2n}} = H(n) \quad \prod_{i=1}^n H_i \quad \bigcap_{n=0}^{\infty} X_n \quad f_n(t) = \frac{2^{n-1} e^{-2t}}{(n-1)!} \quad H_r(x) = \frac{Gr(x)}{1 + Gr(x)} \quad \Delta u = \sum_{k=1}^n \frac{1}{k} \\
 &\int d\phi_k(x) \geq \frac{1}{2} \sum_{k=1}^n \frac{1}{k} \quad \int_{-1}^1 f_n(u) f_n(t-u) du = \frac{2^{n-1} e^{-2t}}{n!} \quad \lim_{n \rightarrow \infty} \frac{f_n(u)}{n!} = 0 \quad \lim_{n \rightarrow \infty} \frac{f_n(u)}{n!} = p_k \quad R = \int_{-\infty}^{\infty} f(t) dt \quad U_k^* = (2u) - (2u - c) \\
 &\log \varphi(t) = i \gamma t - c [t]^k [1 + \frac{1}{k!} \omega(t)] \quad \beta(u) = \sum_{k=1}^n \psi^k(u) \quad C_{iv} = \sum_{j=1}^n a_{ij} b_{ij} \quad \lim_{n \rightarrow \infty} \left(\frac{\gamma_n + \eta_n - \log \frac{1}{f}}{1 - \frac{g}{g}} \right) C_n(\alpha) \approx \frac{n!}{\prod_{k=1}^n k!} \left| \frac{\sin t_k}{t_k} \right| \varphi(t) e^{-itx} + \varphi(t e i) \\
 &\int_{-\infty}^{\infty} e^{-\frac{u^2}{2}} du = \sqrt{2\pi} \quad |\psi_S(h)| = \left| \int_{-\infty}^{\infty} e^{i h x} dF(x) \right| \leq \int_{-\infty}^{\infty} e^{-|x|} dF(x) = \varphi_S(i) \quad g^{-1} N_g = \{g^{-1} n_g | n_g \in N\} \quad Q = F^{-1}(Q) \quad q_A(\alpha) = \frac{p_k}{\sum_{j=1}^n p_j} \quad P(\pi_2) = \\
 &\{X \cup Y\} = |X| + |Y| - |X \cap Y| \quad \lim_{n \rightarrow \infty} \frac{1}{n} \ln \left(\frac{x}{n} \right) = \frac{1}{2\pi} e^{-\frac{x^2}{2}} \quad p_n(k) = \frac{1}{2\pi} \sup_{\frac{1}{2n} \leq \frac{|k|}{n} \leq \frac{3}{2n}} p \left(\lim_{n \rightarrow \infty} \sup_{\frac{1}{2n} \leq \frac{|k|}{n} \leq \frac{3}{2n}} \frac{1}{2n \log \log n} \right) \leq 1 \quad (q_1) = 1 - \sqrt{1 - e^{-q_1}} \\
 &Q(A) = \int_A q(\omega) dP \quad \ell'(x) = -\log 2 \left(\frac{\sum_{k=1}^n p_k^* \log \frac{1}{p_k}}{\sum_{k=1}^n p_k^*} - \left(\frac{\sum_{k=1}^n p_k^* \log \frac{1}{p_k}}{\sum_{k=1}^n p_k^*} \right)^2 \right) \quad \frac{1}{2} g(u_i) = \frac{1}{2} \left(\sum_{j=1}^n a_{ji} v_j \right) = \sum_{j=1}^n a_{ji} \left(\sum_{k=1}^n b_{kj} u_k \right) \left(\frac{2t_k}{2t_k} \right) \approx \frac{1}{\sqrt{2\pi}} \\
 &q \left(e^{-x} \sqrt{\frac{1-g}{nq}} - 1 \right) \approx \sqrt{\frac{q(1-g)}{n}} + q \left(\frac{1}{n} \right) \quad \prod_{k=1}^r \left[g_k \left(\frac{t}{T_k} \right) \right]^{u_k} = e^{-\frac{t^2}{2}} \quad P_{ijk}^{(m)} = \sum_{l=0}^m P_{ijl}^{(r)} P_{ljk}^{(m-r)} \quad \frac{1}{2\pi} \int_{-\infty}^{\infty} \operatorname{Re} \left\{ \varphi(t) \frac{e^{itx} - e^{-itx}}{it} \right\} dt \quad P(\omega_1 | \omega_2) \leq \frac{C_q}{\log N} \\
 &\liminf_{N \rightarrow \infty} \int_{-\infty}^{\infty} f_N(x) dx \geq \int_{-\infty}^{\infty} f(x) dx \quad M(\log_2 - N^2) = \int_{-\infty}^{\infty} (1-x) e^{-x} dx \quad \lim_{N \rightarrow \infty} \int_{-1}^1 f_N(x) \log \frac{1}{f_N(x)} dx = \int_{-1}^1 f(x) \log \frac{1}{f(x)} dx \quad N_{k_1 - k_2} = (2u + k_2) = (2u - \\
 &D^2(J_n) \leq \frac{N}{n} + 2U \left(\frac{1}{n} \sum_{k=1}^n R(k) \right) \quad \det(M') = \det(M) + \det(M'') = \det(M) \quad h(x, y) = \frac{1}{2\pi} \left[e^{-\frac{x^2}{2}} - e^{-\frac{y^2}{2}} \right] \quad |M(C_n, \epsilon_n)| \leq C_1 \sqrt{\frac{n}{m-n}}
 \end{aligned}$$

Complete rigorous description of the real-world?

NO...

Some **basic definitions** (to avoid confusion):

The discipline:

Machine learning: “[Machine Learning is the] field of study that gives computers the ability to learn without being explicitly programmed.” (*Arthur Samuel, 1959*)

Statistical learning: it is actually machine learning!

Machine learning arose as a subfield of **Artificial Intelligence**, whereas **Statistical learning** as a subfield of **Statistics**.

Now, the distinction has become more and more blurred.

Some basic definitions (to avoid confusion):

Some similar expressions:

Artificial intelligence: “the study of any intelligent agent, i.e., any device that perceives its environment and takes actions that maximize its chance of success at some goal.” (Poole, Mackworth & Goebel, 1998)

It is a large set of disciplines that try to “mimic” rationale intelligence in machines. Machine learning obviously plays a key role.

Pattern recognition, data mining and knowledge discovery in databases (KDD): although they are sometimes referred to as “branches” of machine learning, they are hard to separate from it.

Some basic definitions (to avoid confusion):

House area (feet ²)	# bedrooms	# bathrooms	Recently renewed	Price (1000\$)
523	1	2	No	115
645	1	3	No	150
708	2	1	No	210
1034	3	3	Si	280
2290	4	4	No	355
2545	4	5	Si	440

A

Machine learning

- Predict B given A
- Running software (web site\ mobile app)

Output: Code and program

B

Data mining

- Houses with 3 bathrooms are more expensive than those with 2 bathrooms of the same size
- Recently renovated houses cost 15% more

Output: Slide deck

Supervised learning

The science of inferring a function f from a finite set of labeled data

Problem:

Given $\{y_1, y_2, \dots, y_N\}$ corresponding to $\{u_1, u_2, \dots, u_N\}$, find f

Note: when f is a dynamical systems and u and y are time signals, the supervised learning problem is usually known as **System Identification** (see the next course!)

Here: y can be either numerical or categorical variables!

Examples of supervised learning

Pedestrian detection

«Training» dataset

Examples of supervised learning

Pedestrian detection

Labels available!

Examples of supervised learning

Pedestrian detection

??

«Test» dataset

Examples of supervised learning

supervised

unsupervised

**Statistical
Learning**

semi-supervised

reinforcement

Unsupervised learning

The science of inferring a function f to describe hidden structure from unlabeled data

Problem:

Given $\{u_1, u_2, \dots, u_N\}$, find f

Note: y is NOT an output, but a certain property of the data, i.e., their probability density function or a certain pattern

Example of unsupervised learning

The Cocktail party problem

Lots of overlapping voices (hard to hear what everyone is saying!)

Take 2 people talking with microphones at different distances from the speakers

Problem: to process audio recordings, determine there are 2 audio sources and separate them out

What's the difference?

Supervised VS Unsupervised

supervised

unsupervised

**Statistical
Learning**

semi-supervised

reinforcement

Semi-supervised learning

Function learning with **mixed** labeled/unlabeled data (NOT IN THIS COURSE)

Reinforcement learning

Learning a task (not a model)...

It's the science of **learning from data a control policy!**
(NOT IN THIS COURSE)

TAKE HOME LESSONS

- **Automated learning** is the key ingredient of future ICT (not only automation and control)
- It's definitely worthwhile to learn **data science** in general! (very good jobs, it makes the difference in a business...)
- Machine learning, data mining, pattern recognition...several names for similar stuff!
- In this course, 4 main topics:
 - ✓ **Mathematical foundations of learning theory**
 - ✓ **Supervised learning** (dynamical models in SIAP)
 - ✓ **Unsupervised learning**
 - ✓ **Learning with time series**

Dunning-Kruger Effect
